EXPERIENCE

Metawatt

August 2026 – Present

Software Developer Intern

- Support two concurrent product teams with feature development, bug fixing, and manual testing, covering UI behavior, business logic, and error-handling paths.
- Resolve assigned UI, functionality, and error-handling bugs end to end — reproducing the issue, tracing root cause, applying the fix, and re-verifying against expected behavior.
- Perform manual test case execution and exploratory testing, documenting clear, reproducible issues with expected vs. actual results for developer triage; identified a boundary-validation defect that allowed an unbounded year value to be entered and persisted in a date field.
- Use AI-assisted development tools to speed up debugging and code comprehension while validating all output against functional requirements.

ESCA (TypeScript, Supabase, React Native)

March 2026 – Present

Full-Stack Developer — Freelance / On-Call

- Deliver scoped features and bug fixes on an on-call basis for a cross-platform mobile application that lets farmers track crop inflow and outflow across a multi-tier agricultural supply chain (farmers, middlemen, and buyers).
- Integrated the React Native frontend with Supabase backend services and databases, orchestrating real-time data flow between client and server across the full stack.
- Diagnosed and resolved multi-trigger concurrency defects in core authentication features; developed state-based front-end execution locks and a custom **Promise.race** architecture in TypeScript that eliminated system lock-ups across unpredictable networks.
- Identified overlapping screen layouts between distinct user roles and proposed a modular, reusable screen framework that reduced architectural redundancy and code duplication.

NOAH Business Applications (Remote)

June 2025 – July 2025

Developer Intern

- Executed rule-based UI test cases against company-defined business rules, documenting Pass/Fail outcomes and expected behavior for each failed case.
- Mapped business rules to website functionality and verified accuracy against functional requirements, strengthening requirements traceability across the test suite.
- Built foundational skills in functional verification, test documentation, and structured defect reporting.

ACADEMIC PROJECTS

KAIZEN FORMS (HTML, CSS, JavaScript, Node.js, PHP, MySQL)

Full-Stack Developer

- Engineered a responsive full-stack web application that streamlines end-to-end exit interview evaluation workflows across a multi-tier client data framework.
- Designed and modified database interactions and backend modules for question management and response evaluation.
- Added sorting functionality, refined error handling, and integrated backend logic with the UI for reliable end-to-end behavior.

EDUCATION

Saint Louis University — Baguio City, Benguet, Philippines

2022 – 2026

Bachelor of Science in Computer Science — **Cum Laude**; Dean's Lister (2022 – 2026)

SKILLS

- **Development Languages:** Java, Python, JavaScript, SQL, PHP, HTML/CSS, TypeScript
- **Development Tools:** Git/GitHub, Visual Studio Code, IntelliJ IDEA, Orca
- **Frameworks:** ExpressJS, React Native
- **Database:** MySQL, Supabase
- **Testing & QA:** Manual Functional Testing, Defect Documentation, Bug Reproduction & Root Cause Analysis, Requirements Traceability
- **Soft Skills:** Communication, Growth Mindset, Problem-solving, Team Collaboration, Adaptability

SEMINARS

- Trend Micro Cyber Defense Society — April 18, 2024 & March 20, 2025
- GDG DevFest Baguio 2024 — November 9, 2024
